Repeal of Reporting Requirements for Asphalt Pavement Containing Recycled Rubber

Reference: LPP 94-13, "Revised Reporting Requirements for Asphalt Pavement Containing Recycled Rubber"

LPP 93-05, "Reporting Requirements for Asphalt Pavement Containing Recycled Rubber"

Effective Date: January 1, 1996

Approved: _____

Assistant Program Manager
State & Local Project Development

This procedure repeals the existing reporting requirements on the use of federally funded asphalt concrete or binder, asphalt pavement or binder containing recycled rubber, and asphalt pavement containing other recycled materials.

EXISTING PROCEDURES

The original procedures, specified in LPP 93-05, "Reporting Requirements for Pavement Containing Recycled Rubber," required local agencies to report, on a **quarterly** basis, the use of federally funded asphalt concrete or binder, asphalt pavement or binder containing recycled rubber, and asphalt pavement containing other recycled materials. LPP 94-13, "Revised Reporting Requirements for Asphalt Pavement Containing Recycled Rubber," revised the reporting requirement to a **yearly** one.

NEW PROCEDURES

The National Highway System Designation Act of 1995 deleted the minimum mandatory usage of asphalt pavement containing recycled rubber (rubberized AC) requirement contained in the Intermodal Surface Transportation Efficiency Act of 1991. Therefore, local agencies will no longer be required to prepare "Recycled Materials Reports" on the usage of rubberized AC in California.

LPP 94-13 and LPP 93-05 are hereby repealed.
